## Equal and needs-based services for older people – RAI assessment training model

## Finnish RAI assessment training model

• Promotes unified RAI (Resident Assessment Instrument) competence among social and health care professionals.

## RAI – Resident Assessment Instrument

- Standardized system for assessing service needs and preparing a care, rehabilitation and service plan.
- Ensures consistent and reliable practices in RAI assessment and use of RAI assessment information.
- Was developed to support the national deployment of RAI in social services for older people in Finland.
- RAI assessment information supports the care professionals decision-making process.
- Developed and maintained by interRAI, an international network of researchers.

## Finnish RAI assessment training model

- RAI trainer training program for social and health care professionals
- Guides to the principles of RAI assessment and the use of assessment

information in care planning.

• Qualifies the participant to organize and conduct RAI assessment training for

National level

- social and health care personnel using a unified training model and content.
  - RAI assessment training for care professionals in services for the older people
    - Qualified RAI trainers conduct RAI assessment training using unified training model and content.
    - Training prepares care personnel for the principles and implementation of RAI assessment and the use of assessment information in care planning.

Organizational

level

A care professional who has completed RAI assessment training

- Carries out RAI assessments and utilizes RAI assessment information in care and rehabilitation planning and follow-up.
- Follows consistent and responsible practices in RAI assessment.

National level

Finnish RAI trainer network for qualified RAI trainers

- Supports trainers training competence.
- Ensures that up-to-date training material is available for trainers and used in RAI assessment training.

"Better assessment, better care, better outcomes"
